Capture the little details of the world with Dmiedit Aptio V2. Get to know why I'm.Eleaf iStick C30, The smallest and lightest battery on the market Featuring an eliquid-capacity of 1.5ml and a large 1.6mm atomizer. The C30 is a battery that is ideal for both beginners and advanced vapers alike, with its small size and light weight making it easier to transport. The C30's battery is fully replaceable and can be charged through the USB connection at a rate of 2.4A. It can be charged fully in around 2 hours and may be left to charge whilst you vape, which keeps your battery packed with energy. The iStick C30 features a compact sized deck and a large 1.6mm atomizer, with a starting resistance range of 0.5-1.8ohm. The C30 is a flavourful and smooth vape with its ceramic coil head providing a consistent vape each and every time. The C30 features a full stainless steel body, ensuring it is durable and long lasting. Made with thick and sturdy construction in mind, the C30's LED display is easy to read at a glance.Q: Let \$A\in M_{n\times n}\$ be a nilpotent matrix and let \$V\in M_n\$ be an invertible matrix. Does \$\text{rank}(VAV^{-1})=\text{rank}(A)\$? Let \$A\in M_{n\times n}\$ be a nilpotent matrix and let \$V\in M_n\$ be an invertible matrix. Does \$\text{rank}(VAV^{-1})=\text{rank}(A)\$? I am having some trouble in solving this question, can you please check my solution and help? Thank you in advance. A: Hint: Let \$\mathbf{A}\$ be the companion matrix of the polynomial \$x^n+a_{n-1}x^{-1}+\dots+a_1x+a_0\$.

Then, \$V^{-1}\mathbf{A}V=\mathbf{A}\$. This is the problem solved by Phillips and Sylvester in An indeterminate matrix f678ea9f9e
